

Wi-Fi Connection Instruction

SOLAR

SMART LIVING

1. Reset the Wi-Fi extender by pressing and holding the hidden reset button on the device for 10 seconds.
 - After one minute confirm on your mobile device that you can see the network 'TP-LINK EXTENDER'.
 - Your Wi-Fi Extender is plugged into a power outlet by your inverter.
 - *Wi-Fi extender can also be on the inside wall opposite to your inverter.

2. Press WPS button on router and on the range extender (Your router will start looking for devices for around a minute).

3. A green or blue LED light will start blinking as the Wi-Fi Extender searches for your router.

****If your Wi-Fi extender is too far from router, you may bring it to a plug closer to your inverter. Complete the process and then take it back to the original location once communication was achieved. Questions? Give us a call.***
